

Hanh Tran

Senior Full-Stack Developer | AI Product Integration

Full-Stack Engineering / AI Workflows / Backend APIs / React / Next.js / Python / FastAPI / Product & Delivery

 tnnghanhanh@gmail.com  linkedin.com/in/hanhtran47  github.com/hanh-trannguyen  Da Nang, Vietnam

SUMMARY

Full-stack developer with 6+ years of experience building web applications with React, Next.js, Python, FastAPI, and related frameworks. Recent work focuses on AI-powered products, LLM integration, LangChain pipelines, OpenAI-based automation, and practical AI-assisted product delivery.

I am comfortable working across frontend, backend, API design, and AI workflows, especially in projects where early product ideas need to be clarified and turned into working software.

OBJECTIVE

Looking for meaningful work where steady effort leads to visible outcomes, and where I can contribute to useful projects, stronger teams, and long-term organizational growth.

HIGHLIGHTS

Enjoy contributing to growing teams through project delivery, clearer processes, better collaboration, and steady team improvement.

Use agentic AI carefully as part of the development workflow: helpful for speed and repetitive work, but always paired with technical review, logic control, and product judgment.

EXPERIENCE

Confidential Products

01/2026 - Present

Technical and AI product support for early-stage products

Present

ROLE: Technical & AI Product Support

TEAM SIZE: Confidential

STACK: AI Workflow, Product Requirements, Technical Planning, Backlog Support, Agile/Scrum, Stakeholder Communication

Supporting technical planning, AI workflow definition, and product coordination for early-stage products that are not yet publicly launched.

- Clarified AI use cases, technical requirements, priorities, and delivery scope with stakeholders.
- Prepared user flows, AI workflow notes, and implementation-ready tasks for development planning.
- Supported backlog organization, sprint planning, and practical AI integration decisions.

carrotcake AI

09/2024 - 03/2026

AI-driven marketing analytics platform

1.5 years

ROLE: Full-Stack Developer / Tech Lead

TEAM SIZE: 7

STACK: React, Next.js, TypeScript, Python, MongoDB, LangChain, OpenAI, Azure Services

AI-driven marketing analytics platform integrating with Meta and Google ad accounts to provide advertising insights and optimization suggestions.

- Led technical planning for analytics and AI workflows, translating product requirements into frontend, backend, database, and AI implementation tasks.
- Designed backend APIs and MongoDB data structures for ad account integration, analytics processing, and AI-powered response generation.
- Built LangChain and prompt workflows to structure marketing insights, optimization suggestions, and AI-generated analytics responses.
- Supported team delivery through technical guidance, code review, implementation support, and coordination across product and engineering tasks.

Educational Online Testing Platform

03/2023 - 09/2023

Custom assessment & analytics platform

6 months

ROLE: Full-Stack Developer

TEAM SIZE: 5

STACK: React, Chakra UI, Web3, Python, FastAPI, GraphQL, AWS

Online testing platform for teachers and learners, supporting custom assessments, progress tracking, analytics, and secure test payments through Metamask.

- Built backend APIs with Python, FastAPI, GraphQL, and AWS for core product workflows.
- Developed React and Chakra UI components with Web3 integration for blockchain-related user flows.

- Implemented smart contract functionality for test payment workflows and added core test coverage.

SarsiAI

11/2022 - 03/2023

OpenAI-powered prompt improvement application

4 months

ROLE: Backend / AI Integration Developer
TEAM SIZE: 3
STACK: Python, FastAPI, OpenAI API, SQLite, MySQL

- Integrated OpenAI API into chatbot workflows to generate context-aware responses, prompt improvements, and user-facing suggestions.
- Built secure FastAPI services to manage chat requests, conversation state, AI processing, and backend data flow.
- Improved response reliability and added backend unit tests to support stable chatbot interactions.

Acante APM Libraries

02/2022 - 10/2022

Python observability libraries for traces, logs, and metrics

8 months

ROLE: Backend Developer
TEAM SIZE: 2
STACK: Python, Flask, PostgreSQL, AWS, Docker, Kubernetes

- Built Python instrumentation packages extending OpenTelemetry to collect traces, logs, and metrics from backend services.
- Implemented observability support for common Python libraries, including DB-API, pycopg2, SQLAlchemy, boto3, and DynamoDB.
- Set up load and performance testing with Locust and JMeter to validate service behavior under higher traffic.

Manulife CSM

09/2022 - 11/2022

Customer service management platform for insurance agents

2 months

ROLE: Backend Developer / Frontend Support
TEAM SIZE: 8
STACK: NodeJS, NestJS, React, MUI

- Designed and implemented RESTful APIs to support customer service workflows for insurance agents.
- Handled backend data flow and validation to maintain consistency across customer and policy-related records.
- Supported UI implementation to improve usability for agents and internal users.
- Provided post-launch guidance and operation support to help the team use and maintain the system smoothly.

Kinspire Health - Kids & Family Care App

10/2021 - 03/2022

Children's development tracking platform

5 months

ROLE: Backend Developer

TEAM SIZE: 6

STACK: Python, Django, SQLite, MySQL

- Built backend features for a children's development tracking platform handling sensitive user data and HIPAA-aware engineering practices.
- Analyzed requirements and structured backend workflows to support core product features.
- Designed and developed RESTful APIs using Python and Django.
- Added unit tests to validate backend behavior and reduce regression risk.

Puma Data Analytics - Capstone Project

01/2021 - 07/2021

Return probability prediction and analytics dashboards

6 months

ROLE: Data Analytics / Machine Learning Contributor

TEAM SIZE: 2

STACK: Python, Machine Learning, Scikit-learn, Tableau

- Cleaned and analyzed sales transaction data to uncover product return patterns and trend signals.
- Built and tuned machine learning models to predict product return rates within selected time periods.
- Created Tableau dashboards to visualize return trends and make analysis easier for business stakeholders.

Amoda

01/2020 - 09/2020

Fashion e-commerce mobile app with virtual try-on support

8 months

ROLE: AI Engineer

TEAM SIZE: 10

STACK: Python, Django, AWS, Machine Learning

- Built data structures and machine learning models to recommend clothing items based on user preferences and product attributes.
- Worked with the Product Owner to verify recommendation logic and align model outputs with product expectations.
- Supported backend development and AWS deployment workflows.

EDUCATION

07/2021

Master of Professional Studies, Analytics

Northeastern University · Boston, MA

GPA: 3.915/4.0

2013 - 2017

Bachelor, International Business

University of Economics - Danang

Graduated with Good standing

SKILLS
